Siggraph 2007 Booth #106

SeeFile and Intelligent Gadgets Collaborate at Siggraph 2007

Complete collaboration bundle, including software packages, server and 1 terabyte of storage hardware, priced at \$1,995

LOS ANGELES, CA and Boston MA – July 31, 2007 – Intelligent Gadgets

(www.syncvue.com), the creators of advanced collaborative digital media review and approval tools, and SeeFile (www.seeFile.com), a developer of web server software for sharing media files, today announced the two companies are joining forces at Siggraph 2007 in San Diego (August 7 – 9) to demonstrate the benefits of a combined video-enabled collaborative review and approval system. During the conference, the bundled solution will be demonstrated at the SeeFile booth, and will be available for immediate purchase.

The bundle comprises 5-user preinstalled versions of both SeeFile 3.0 and syncVUEpro, loaded on an Apple Mac mini server with one terabyte of hard disk space. The Mac mini functions as the server for the combined solution, allowing large video files to be uploaded, downloaded and reviewed online in a seamless fashion from both PCs and Macs over the internet. The combined hardware/software solution bundle includes everything needed for a video editing facility or educational institution to create their own video sharing server for remote review. The bundle is priced at \$1,995 and is available from SeeFile and its dealers worldwide.

Intelligent Gadgets' syncVUEpro is a Skype-based media review tool that delivers users a collaborative, synchronized video review and approval experience. SeeFile 3.0 is a powerful web server solution that enables users to access media files via any browser on any PC or Mac system, and provides the tools necessary to efficiently manage and collaborate on video editing projects. Both products support access from any combination of PC and Mac computer systems over the internet, so that editors and clients using any mix of systems can upload, download and even watch and annotate video files in a synchronized fashion.

"We are delighted to offer this complete solution for the video market, which integrates the file uploading, downloading and collaboration tools of the SeeFile 3.0 system and the synchronized online viewing and annotation features of syncVUEpro" said Paul Navitsky, Product Manager of SeeFile.

"Teaming up with SeeFile at Siggraph 2007 provides us an excellent opportunity to demonstrate new innovations to the collaborative review and approval workflow," said Michael Buday, president of Intelligent Gadgets. "Combining syncVUEpro with SeeFile to create an enhanced collaborative workflow is a great example of how working closely with our strategic partners results in new layers of value for our customers."

Pricing and Availability

Complete bundled server systems are available immediately, priced at \$1,995 including 1 terabyte of hard disk storage. The same configuration in a software-only bundle is priced at \$995. Both configurations are purchased outright, with no monthly hosting or service fees required. For more information, please contact Marilina Fernandez at SeeFile Software at 617-262-2464, info@seefile.com, or visit www.seefile.com.
